About Me

Since 2021, I have been working as a backend-focused developer on software projects, while also contributing to frontend development when necessary. I specialize in the .NET ecosystem, Azure services, and SQL Server. In B2B ERP and AI-based recommendation systems, as well as B2C finance projects, I have contributed to general development and additionally delivered solutions focused on performance, scalability, and system integration. I have particular experience in data processing, multi-tenant architectures, and service-oriented system design.

Work Experience

Back-End Developer – Getron Information Technologies (04/2024 – Present)

- Contributed to the development of Getron AI Services (GAIS), a B2B multi-tenant recommendation platform that processes daily ERP data such as sales, inventory, and returns to generate operational work orders for companies. The platform provides company-specific configurations to increase inventory turnover, generate discount recommendations, and improve operational profitability.
- Developed a Windows Forms-based management application used for company configuration management, service monitoring, and error tracking.
- Monitored production systems and resolved critical issues by quickly updating and redeploying services to ensure system continuity.
- Migrated the GAIS platform from .NET Framework to .NET Core.
- Implemented integrations with Microsoft SSO, Microsoft To Do, and Zoho Desk

Technologies: .NET Core / .NET Framework, SQL Server, PetaPoco, Azure Storage Services, Quartz

Back-End Developer – BestERA Software & Consulting (04/2023 – 04/2024)

- Contributed to the development of B2B ERP management systems built with .NET Core / .NET Framework, covering field operations, audit management, and sales processes. Developed modules for employee visit planning, personnel and product inspections, sales campaigns, and reporting.
- Designed and implemented flexible ERP solutions adaptable to multiple industries.
- Collaborated with frontend teams to manage API design and data flows using GraphQL
- Developed data tracking and reporting applications using .NET Core and GraphQL.
- Implemented new services in a microservice architecture using Ocelot API Gateway.
- Improved database performance using Stored Procedures and Views.
- Implemented Unit Tests for new functionalities.

Technologies: .NET Core / .NET Framework, SQL Server, Entity Framework, GraphQL, Ocelot

Full-Stack Developer – Ludens Advanced Financial Services (07/2021 – 04/2023)

- Contributed to the development of a subscription-based B2C Fund Analysis Platform built with .NET Core MVC, providing features such as fund analysis, price tracking, performance comparison, and investment recommendations. The platform reached 200+ active users within 3 months after production release.

- Designed and implemented a scoring-based flexible survey module to analyze investor behavior.
- Led UX decisions and implemented responsive UI improvements for the B2C platform.
- Contributed to development in a B2B API project built with .NET Framework.
- Debugged and enhanced scheduled .NET Core background services running on the server.
- Improved slow-performing pages by implementing code optimizations, paging, and SQL indexing, achieving performance improvements of at least 50%.
- Integrated external services including Paraşüt E-Invoice, Moka Payment System, and YouTube API.

Technologies: .NET Core/Framework, Entity Framework, SQL Server, ADO.NET, MVC, Web API, Hangfire, HTML, CSS, JavaScript

Tech Stack

Backend: .NET Core / .NET Framework, Entity Framework, Web API, ADO.NET, PetaPoco, GraphQL, MVC, RabbitMQ, Ocelot, Hangfire, Quartz

Cloud : Azure Storage Services

Database: SQL Server / T-SQL, Redis

Frontend: HTML, CSS, JavaScript, JQuery, Bootstrap

Education

- Beykent University / Computer Engineering(10/2018 - 09/2022 / **Graduation Grade : 3,19**)
- Maçka Akif Tunçel Anatolian Technical High School / Web Programming (09/2013 - 06/2017)

Language

- English – Intermediate

Interests

I closely follow developments in the computer world from both hardware and software perspectives and enjoy sharing knowledge and participating in discussions on relevant forums.
